1 Des relations et des requêtes

Soient R et S deux relations dont la valeur est donnée dans les tableaux suivants :

| R | A | В |
|---|---|----|
| | 5 | 9 |
| | 2 | 7 |
| | 5 | 12 |

| В | С |
|----|-----|
| 9 | 100 |
| 12 | 101 |
| 8 | 110 |
| 7 | 101 |
| 8 | 112 |
| 9 | 120 |
| 9 | 101 |

Question 1:

Donner, sous forme tabulaire, le schéma et la valeur de la relation construite par chacune des requêtes ci-dessous. Il peut s'agir d'un message d'erreur Oracle. Dans ce cas, expliquez la cause de l'erreur.

```
1. SELECT *
  FROM R JOIN S ON (R.B=S.B);
                                             7. SELECT B
                                               FROM S
                                               GROUP BY B
2. SELECT DISTINCT B
                                               HAVING MAX(C) > 101;
  FROM R JOIN S USING (B);
3. SELECT DISTINCT A, C
  FROM R JOIN S ON (R.B > S.B);
                                             8. SELECT C
                                               FROM S
                                               GROUP BY C
4. SELECT B, COUNT(*)
                                               HAVING COUNT(DISTINCT B) IN (
  FROM S
                                                  SELECT COUNT (DISTINCT B)
  GROUP BY B;
                                                  FROM R
                                               );
5. SELECT C
  FROM S
                                             9. SELECT MAX(C) AS maxC
  GROUP BY B, C;
                                               FROM S;
6. SELECT B, AVG(C) AS Moyenne
                                           10. SELECT C, MAX(B) AS maxB
  FROM S
                                               FROM S
  GROUP BY B;
                                               GROUP BY C;
```
